

A Supporting Act Scaffolding by Xervon

ThyssenKrupp Xervon
Powering Plant Performance

ThyssenKrupp

Best set up for you

To erect buildings or industrial installations as well as for service, maintenance or repair, scaffolding

provides a supporting act in the truest sense of the word. Be it classical façade scaffolds, flexible solutions based on modular scaffolding systems or other special designs as suspended or mobile scaffold – actually, there is no job the Xervon scaffolding experts have not managed to solve.

In thousands of the most varied contracts and major projects, Xervon have proved their competence and expertise within the wide range of scaffolding.

Industrial applications, such as maintenance and servicing in the chemical and petrochemical industry or in power stations put the creativity, flexibility and precision of our engineers and scaffolders to the test again and again, to come up with the most efficient solution.

Prompt availability of material and personnel, special designs for extreme requirements of structural engineering under the most difficult of mounting conditions and last, but definitely not least 100% compliance with occupational safety requirements – that's what Xervon stands for.

With some 130,000 tons of material worldwide and more than 1,000 vehicles regarding just Germany, we are one of the largest companies in anything to do with scaffolding, but not only from a logistical point of view. Our extensive network of subsidiaries enables us to achieve the presence, flexibility and rapid order processing you would expect of a service provider today.

This is what we supply you with in scaffolding:

- Industrial
- Façade
- Specials
- Mobiles
- Housings for weather and environmental protection
- Grandstands
- Elevating & Mast-climbing Platforms
- Lifts

Safety is our Trademark

In industry as well as building and construction, the issue of “safety in scaffolding” is increasingly coming to the fore. Major companies in particular are under constant scrutiny where occupational safety and accident statistics are concerned. To ensure that you have a safe standing in the public eye, we at Xervon have imposed high quality and safety standards on ourselves, which are continuously revised and improved. These standards are supported and sustainably secured through an integrated management system in accordance with DIN EN ISO 9001 and 14001 as well as the SCC** system and the international OHSAS 18001 standard.

Successful safety always stands for high quality standards and, consequently, efficient work. To further optimize our above-average standards, we have developed a special instruction program for each and every one of our staff. This applies not only to our scaffolders, but also, and in particular, to our management staff, to train them, amongst other, in “the avoidance of behavior-based accidents”. Our programs are designed to permanently sensitize all our employees and establish an optimal safety culture for the benefit of all those involved.

Service with a System

For new building projects as well as maintenance contracts, scaffolding has a vital function wherever it forms the basis for safe and unobstructed access of all the subsequent trades to those areas that would otherwise be difficult to reach.

Apart from classical scaffolding solutions, we are sought after as a reliable and competent partner when it comes to specialized designs and solutions. It is our ambition at all times not only to meet requirements, but to employ our know-how innovatively, with a continuous look at the future. That's what Service with a System means for us.

The benefits for you at a glance:

- some 130,000 tons of scaffolding material admissible under building law in stock
- Structural engineering in-house and in cooperation with specialized engineering firms
- Competence and experience drawn from decades of scaffolding activities and several hundreds of complex scaffolding projects a year in various industrial sectors
- More than 1,000 scaffolders and skilled scaffolding personnel of our own
- Professional sub-contractor management
- Comprehensive safety standards, going beyond legally stipulated requirements

May it be a little more?

ThyssenKrupp Xervon is a 100% service provider with a clear commitment to customer orientation. Our objective is to create value added for our customers, going beyond the actual service as such. This implies that we are there for you even after construction has been completed, to provide valuable services particularly in maintenance. For this purpose, we involve our experts from all the different trades. You benefit from a virtually unique range of services around your core business, end-to-end solutions, minimized interfaces, high cost and work efficiency as well as maximum flexibility and availability of staff and material for the preservation of your building and your facilities.

In the chemical and petrochemical industry, we have already developed and implemented concepts for comprehensive repair and maintenance management with budget responsibility. These concepts allow significant cost savings to be realized on a mid-term basis; an option worth thinking about.

Talk to us about your ideas and projects for the future. We will gladly tell you in detail how we may assist you and be more successful together.

The Xervon service around your core business:

- Scaffolding
- Insulation
- Surface technology
- Piping
- Full-service maintenance
- Shutdown management
- Building preservation
 - Painting and façade work
 - Roofing und proofing
 - Concrete repair
 - Comprehensive building refurbishment
